

**NOTICE OF COMMUNITY MEETING FOR THE COLEMAN AVENUE WIDENING /  
AUTUMN STREET EXTENSION GENERAL PLAN AMENDMENT CITY FILE NO.  
GP07-03-03.**

**Location: Northside Community Center, 488 N. 6<sup>th</sup> Street, Auditorium A**

**Date: Wednesday June 13, 2007**

**Time: 6:30-8:00 pm**

Dear Neighbor,

City of San José Department of Transportation and Planning Division staff would like to invite you to a community meeting on the proposed General Plan amendment File No. GP07-03-03 to change the San Jose 2020 General Plan Transportation Diagram designation on Coleman Avenue from Minor Arterial (80 - 106 feet) to Major Arterial (115 -130 feet) between Hedding Street to the proposed extension of Autumn Street (see attached map and definitions). The project proposes to widen Coleman Avenue to six lanes between Hedding Street and Autumn Street, a distance of approximately 0.8 miles. This segment of Coleman Avenue is currently four lanes. North of Hedding Street, Coleman Avenue has recently been widened to six lanes as part of the I-880/Coleman Avenue Interchange Improvement Project. The project will widen, partially realign, and extend Autumn Street between Coleman Avenue and Park Avenue, a distance of approximately 1.1 miles. Autumn Street currently varies from two to three lanes and terminates north of Julian Street.

This meeting will be an introduction to the proposed General Plan amendment. City staff will present an overview of the proposed General Plan amendment, and explain the City's General Plan amendment process. There will also be an open forum for questions and comments.

Your participation at this early stage of the planning process will help us analyze the General Plan amendment request. If you have any questions before the meeting, please contact:

**General Plan amendment request to change the Transportation Diagram designation on Coleman Avenue from Minor Arterial (80-106 feet) to Major Arterial (115-130 feet) between Hedding Street to the proposed extension of Autumn Street. (Staff initiated amendment)**

***Existing General Plan Designation:***

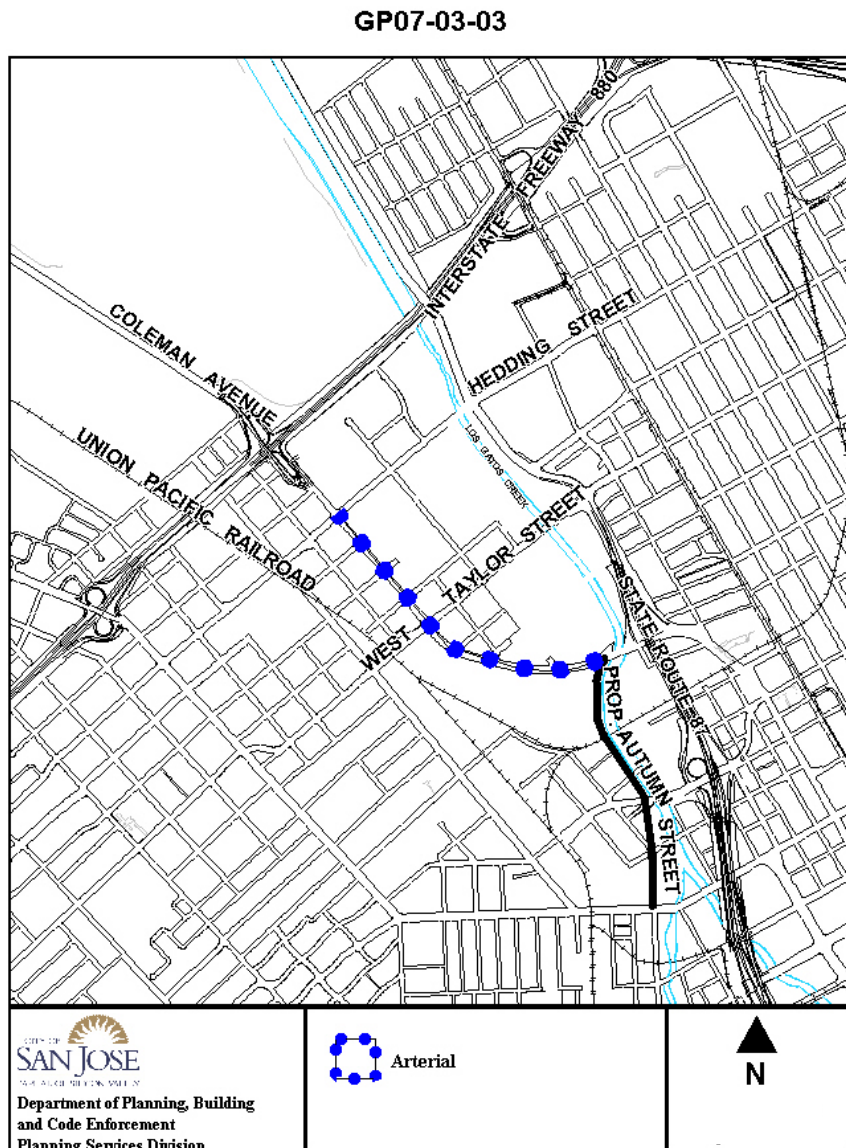

**Minor Arterial**

The Arterial street is designed mainly for the movement of through traffic, which may include light rail transit, but also normally performs a secondary function of providing access to abutting properties. The 80 to 106 foot right-of-way can accommodate either two or four travel lanes. The number of lanes depends on the function of the arterial, its location, and the volume of traffic it is expected to handle.

***Proposed General Plan Designation:***

**Major Arterial**

The Arterial street is designed mainly for the movement of through traffic, which may include light rail transit, but also normally performs a secondary function of providing access to abutting properties. Major arterials are generally planned to contain four or more travel lanes.
